

## SKYLINE CAPITAL MANAGEMENT

### Veteran Internship Position Description

SCM is a cutting-edge innovative enterprise that makes investments in tech, healthcare, real estate and a variety of international businesses. We are a high net worth family office that has achieved financial success but remains on the frontier of human and technological progress, helping to drive positive change. The founding family members remain directly and daily involved. We are also passionate about philanthropy, with a focus on global empowerment of women; improvement of health; and universal access to education.

One of our purposes is to help jump start the careers of young veterans who are independent thinkers, self-starters, and trying to find their most productive and satisfying place in the world. We want motivated young people that will observe, think, learn, help, gain mentors and contacts, and stay for a year or a decade as their passions and goals guide them. Then pass along all that they have gained to others. That is why we are engaging with you!

We are looking for young veterans (ideally at the end of their first or second tours) who want to work in a challenging and dynamic environment that offers a very broad and practical applied education across all aspects and many segments of business. From concept to start-ups to Fortune 500, you will work with them all and – most important – have exposure at the Founder, Investor, CEO and Board of Directors level.

Those accepted will be intimately involved with hiring and mentoring; concept and product development; market research; marketing; sales – both traditional and e-commerce; finance; product launches; program management; customer relations; public policy; and the transition from private to public ownership.

The skills we hope you will bring include:

- Clear thinking and logic.
- Good organization.
- Good listening, good discussion and good debate (each as circumstances dictate)...the ability to challenge authority and speak truth to power.
- Detailed note taking and summarization.
- Ability to research and synthesize large volumes of information, capturing what matters and discarding all else.
- The ability to present your ideas and research clearly, in either speech or writing.

Our near-term priority projects include:

- Fixing California's housing crisis and building a model of sustainable, low-cost housing that is viable across the globe. First pilot project (in West LA) is to be completed in 2019.

- Improving human health. We are launching an e-commerce venture this year to help people evaluate the benefit of supplements (and the possible risks associated with multiple supplements). In the mid-term we are focused on regenerative medicine, especially stem cells and food sciences.
- Next-Generation Information Technology. Our Founder has led several multi-billion dollar ventures in Information Technology and we are involved with a number of new initiatives.
- Next-Generation Industrial Technology. Artificial Intelligence, Machine Learning and Robots are all coming...but we still have to figure out how to integrate them with our industrial infrastructure. Small things that human ingenuity normally solves will be tough for them. So we're building tools like the Vamplier line to help solve these problems.
- Fill In The Blank. What do you think is important to work on? We are always seeking new problems to solve...in every crisis there is an opportunity.
